

## D7200 – Baud Set up & Upload ITSN

Below is a link to the Hand Held program you will need to set the baud rate of your 7200 cradle/base:

1. Download [www.z-space.com/support/dcomm2 Setup.zip](http://www.z-space.com/support/dcomm2 Setup.zip)
2. Unzip DComm2 Setup.zip
3. Run DComm2 Setup.exe
4. After installation, run the DComm2 shortcut from your computer's desktop
5. Click Configuration
6. Set Port and Baud Rate (Baud Rate must be 57.6K)
7. Click OK

The Homebase Baud Rate will be set to 57.6k and then the utility will attempt to connect to the terminal through the Homebase and show a status indicating whether it was able to connect. Once this has been completed, close the DComm2 application and attempt to resend your ITScriptNet program to the 7200:

If the program generator is open:

1. Go to Terminal on the menu bar
2. Click on Select Terminal
3. Verify that the 7200 is the selected terminal
4. On same Terminal menu,
5. Click on Send Program to Terminal
6. In next window, verify port is Com1
7. Checked – Send All Files
8. **Checked - Reinitialize**

If using the Upload Utility, same thing, except in top box, go find the .itb file.
