

I have a customer running ITscriptNet on a HHP 7200. They are looking to upgrade to a Symbol or other type of Win CE or Pocket PC mobile terminal with scanner.
Can they use the existing script software on the new unit.

Yes, your customer may use the existing script software, with little or no modifications, on any device with PocketPC or Windows CE operating systems (with an ARM processor, which nearly all of them do).

Hand Held Products (HHP) has both PocketPC and Windows CE devices that you may be interested in.

If your customer is currently using the ITScriptNet Batch version, we suggest upgrading to ITScriptNet Plus or Omni (if running RF) versions in order to gain the additional benefits of using a device with a Windows Operating System, including checkboxes, radio buttons, grids, color, images, shapes and more.

If you need any additional information, please let us know. We look forward to assisting you with a successful solution.
